DNA (AAT27110) coding for the 62K antigen (AAR96092) of hepatitis E virus (HEV) Mexico strain capsid protein was cloned into baculovirus expression vector pBluBacIII and recombinant 62K was expressed in 549 insect cells. High levels of expression were obtd. and the recombinant 62K was obtd. in over 95% purity. However, C-terminal processing resulted in the deletion of 9 or 23 amino acids from 62K, giving 2 related polypeptide species (AAR96102 and AAR96101 similar results were obtd. with HEV Burma 62K antigen (see also AAR96101 and AAR96103). Recombinant 62K represents an improved antigen, in comparison to bacterial expressed proteins, for use in HEV diagnostic assays, and also has excellent immunogenic properties. (Updated on 16-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Hepatitis E virus (HEV) antigens derived from ORF 2 - useful as diagnostic reagents for determining HEV infection and in vaccines.

It is obtd. inserting encoding DNA (AAT27112) into pBluescript and ligating the cloned insert into vector pGEX for prodn. of SG3 in E. colicells. SG3 shows low antigenicity compared with capsid 62K antigen (see also AAR96019-22 and AAR96101-04) from HEV Burma and Mexico strains that are produced using a baculovirus expression system. (Updated on 16-OCT-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                             A method has been developed for detecting hepatitis E virus (HEV) antibodies (Ab). The method comprises: (a) reacting a serum sample with HBV peptide antigen; and (b) examining the peptide for the presence of bound Ab, where the presence of bound Ab indicates the presence of HEV Ab. The present sequence represents a specifically claimed HBV peptide antigen. The method can be used to diagnose infection with the enterically transmitted non-A/non-B viral hepatitis agent HBV, specifically the HBV Burma and Mexico strains. Hepatitis E virus hollow particle poly:peptide(s) and nucleic acids encoding it - useful for more accurate detection of HEV in samples, using immuno-assays and nucleic acid hybridisation.
                                                                                                        This sequence represents a Hepatitis E viral hollow particle protein described as ORF2. This polypeptide can be used to raise antibodies to detect HEV infection in samples, e.g. by immuno-assay based techniques, and the nucleic acid can be used for the same in nucleic acid hybridisation assays. The polypeptide and nucleic acid allow more accurate detection of HEV than previously possible

                                                                                                                                                                                                                                             240
                                                      The present invention relates to an isolated avian hepatitis E virus having the nucleic acid sequence shown in ABT05872. Vaccines against the virus are also described, and can be used for protecting an avian or mammalian species from viral infection or hepatitis-splenomegaly syndrome caused by the avian or mammalian HEV. The present sequence is a hepatitis E virus protein described in the exemplification of the invention

DNA fragments were manipulated into pGEX vectors for production of GST fusion proteins in E. coli. Applications include HEV

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                           The present sequence is the protein prod, of ORF-2 from the hepatitis E virus (HEV) strain SAR-55, which was implicated in an enterically transmitted non-A, non-B hepatitis in Pakistara. The protein encoded by the structural region of the virus (i.e. ORF-2), which is capable of forming HEV like particles, is useful for the detection of HEV antibodies (pref. 1gG or 1gM) in blood, plasma, sera, cerebrospinal fluid, tissue, urine or pleural fluid. The protein, and anti-HEV antibodies generated using the protein, can also be used in vaccines for immunising an animal against HEV infection. The protein is identified as a band of greater than 50 kD following SDS-PAGE of cell lysates of insect cells infected with a HEV ORF-2 contg. Daculovirus, i.e. the claimed recombinant expression vectors pPIC9-1779, -1780 and -1781
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             789

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         223
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence represents a Hepatitis E viral hollow particle protein. This polypeptide can be used to raise antibodies to detect HEV infection in samples, e.g. by immuno-assay based techniques, and the nucleic acid can be used for the same in nucleic acid hybridisation assays. The polypeptides and nucleic acids allow more accurate detection of HEV than previously possible
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TCTGGTGTTGCTGAGGAAGCCACCTCCGGTCTTGTCATGTTATGCATACATGGTTCT

-:- CATALYTIC ACTIVITY: Carboxybiotin carboxyl carrier protein + acetyl-CoA = biotin carboxyl carrier protein + abonyl-CoA.

-:- PATHMAX: Long-chain fatty acid biosynthesis; first step.
-:- SUBUNIT: ACETYL-COA CARBOXYLASE IS AN HETEROHEXAMER OF BIOTIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CARBOXYL CARRIER PROTEIN, BIOTIN CARBOXYLASE AND THE TWO SUBUNITS OF CARBOXYL TRANSFERASE IN A 2:2 COMPLEX (BY SIMILARITY). SIMILARITY: TO THE C-TERMINUS OF MAMMALIAN PROPIONYL-COA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Lapidus A., Galleron N., Sorokin A., Ehrlich S.D., "Sequencing and functional annotation of the Bacillus subtilis genes
                                                                                                                          Bacteria; Firmicutes; Bacillales; Bacillaceae; Bacillus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MEDLINE=98044033; PubMed=9384377;
                                                                                                                                                                                                                                                                                                                                                                                                                    MEDLINE=98048467; PubMed=9387221;

Biol. 2:71-79(1993).

-i. FUNCTION: Major function may be to aid in digestion of the blood
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              -!- CATALYTIC ACTIVITY: Preferential cleavage: Arg-|-Xaa, Lys-|-Xaa.
-!- SUBCELLULAR LOCATION: Extracellular.
-!- TISSUE SPECIFICITY: Midgut.
-!- SIMILARITY: Belongs to peptidase family S1.
             Plant Mol. Biol. Rep. 13:333-335(1995).
-!- SIMILARITY: Belongs to the S2P family of ribosomal proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Eukaryota; Metazoa; Arthropoda; Hexapoda; Insecta; Pterygota;
